

# Les Arcs sur Argens

## Sainte Cécile

## The water path

This model was made by Patrick, Willy, Daniel, Alain, and Bernard from the modeling section of the **C.A.S.C. (Centre d'Animation Socio-Culturel)** of Les Arcs.

It required **131 hours of work**.

The water powers the mill's bucket wheel. The "**martellière**" (the sluice gate that opens or closes the water passage) allows you to: either feed the wheel directly, with a lower flow rate, or fill the basin first and then turn the wheel, producing a higher flow rate.
